

Intensive, hands-on training session from the top-rated software secure coding experts in Europe.

Web Application Security in JAVA

In Sofia. In partnership with
Cydrill Software Security

25.09 – 29.09.2023 (MON -FRI)
09:00 AM – 13:00 PM

Attend onsite or hybrid/online.

Course Description

Your Web application written in Java works as intended, so you are done, right? But did you consider feeding in incorrect values? 16Gbs of data? A null? An apostrophe? Negative numbers, or specifically -1 or -2³¹? Because that's what the bad guys will do – and the list is far from complete.

Handling security needs a healthy level of paranoia, and this is what this course provides: a strong emotional engagement by lots of hands-on labs and stories from real life, all to substantially improve code hygiene. Mistakes, consequences, and best practices are our blood, sweat and tears.

The curriculum goes through the common Web application security issues following the OWASP Top Ten but goes far beyond it both in coverage and the details. All this is put in the context of Java, and extended by core programming issues, discussing security pitfalls of the Java language and the runtime environment.

So that you are prepared for the forces of the dark side. So that nothing unexpected happens. Nothing.

Intensive, hands-on training session from the top-rated software secure coding experts in Europe.

Web Application Security in JAVA

In Sofia. In partnership with
Cydrill Software Security

25.09 – 29.09.2023 (MON -FRI)
09:00 AM – 13:00 PM

Attend onsite or hybrid/online.

Labs: 26

Case studies: 14

Audience: Java developers working on Web applications

Preparedness: General Java and Web development

Standards and references: OWASP, SEI CERT, CWE and Fortify Taxonomy

What you will learn:

- Getting familiar with essential cyber security concepts.
- Understanding how cryptography supports security.
- Learning how to use cryptographic APIs correctly in Java.
- Understanding Web application security issues.
- Detailed analysis of the OWASP Top Ten elements.
- Putting Web application security in the context of Java.
- Going beyond the low hanging fruits.
- Managing vulnerabilities in third party components.

TESTIMONIALS

“Each topic is presented in great detail.”

“Exercises! Nothing beats a hands-on approach!”

“The whole course was one of the best I've participated in. The content was relevant, presented and paced well. The labs complemented the material in a good way.”

“I really enjoyed the balance between theory, labs, and stories. The information was presented in very affordable way - not too many specific and complicated details, but the same way with great feeling in the end that you pretty well understand what we are discussing and how something should /should not be done. Presentation skills of Erno are great, he manages to keep me listening all the time with interest! :) Really great training, learned a lot!”

“Great trainer - seemed really experienced and was able to draw your attention and keep it till the end. I liked all the real-life examples as well as the labs.”

Terms of Purchase / Purchase Order Confirmation Form

Today, -----, Learn Valley OOD (registered seat: Ekzarh Yosif str. 30 B, Sofia 1000, Bulgaria; company registry number: 204703432; (EU) VAT number: BG204703432) (hereby referred as “Service Provider”) agrees to deliver services for Buyer, as per the below Service Specifications, Terms of Cancellation, Intellectual Property rights, and Terms of Payment.

----- (registered seat: -----; company registry number: -----; (EU) VAT number: -----) (hereby referred as “Buyer”) agrees to order services from Service Provider, as per the below Service Specifications, Terms of Cancellation, Intellectual Property rights, and Terms of Payment.

1. Service specifications
