Digitalization doesn't know borders
and affects every citizen in one or another different way!

Digitalization doesn't know borders and affects every citizen in one or another different way! The society is in the midst of digital transformation and in addition to the protection of fundamental rights and ethical values, it is also about that above all how cities are developing into smart cities and how digitalization is developing across countries in order to benefit their citizen.

In this, E-Government plays an essential role, as it enables many improvements for the majority of citizens, companies and administrations in terms of interaction and information obligations through digital technologies and the digitization of processes and working methods.

Accessible Internet access, cross-border identification and ID cards are just some of the initiatives that are being promoted in this context. So that digitalization really knows no borders and can be used to the benefit of all citizens, framework conditions are needed that must be created. This includes above all cross-border cooperation, intensive discourse on these topics and the willingness to embark on new paths and methods.

With this year's "**ADV E-Government Conference 2021**" **– www.adv.com**, an essential part will be contributed to the advancement of e-government in Europe and Austria to take another step on its way to digitization.
Technical experts will jointly discuss cross-boarder cooperation with regard to the digitization of the various administration levels.

Based on the already existing cooperation's, success factors, but also obstacles and framework conditions that are required for a successful implementation of interoperability in practice, are examined.

Let us work together to ensure that digitization knows no boundaries and can be used to the benefit of all of us without ignoring the downsides.

TAG 1 – 28. SEPTEMBER

Josef-Resch-Saal
10:30-12:00
Diskussion
GRENZÜBERSCHREITENDE DIGITALISIERUNGSSTRATEGIEN INTEROPERABILITÄT IN DER PRAXIS
Moderation: Christian Rupp
