A photograph of a person in a red long-sleeved shirt using a chainsaw to cut a tree trunk in a lush green forest. The person's right arm is raised, holding the chainsaw, and a tattoo is visible on their forearm. Another person in a green shirt is partially visible on the right, also working on a tree. In the background, a colorful parrot is perched on a branch. The text 'How would be the New Economy for the Amazon in 2050?' is overlaid on the left side of the image in white, bold font. A thin green horizontal line is positioned below the text, and a green geometric pattern of overlapping triangles is at the bottom right.

How would be the New Economy for the Amazon in 2050?

livestock, mining, infrastructure,
and financing

WHICH BIOECONOMY?

- Guided by the values of **native and traditional peoples** - defined by its production processes rather than by its products.
- Based on Standing Forest and Forest Restoration
- Limited to the biocapacity of the biome.
- Fair distribution of benefits.
