

Almost all mobile homes and caravans have door lockers. These door lockers comprise of two parts. Locker parts are connected to door and cabin. Adjacent pictures shows an example.

Out of weight reasons most cabins are manufactured with sandwich plates. If it is smart to screw locker parts into sandwich plates is another story.

CS-01 and CI-02

Door lockers for mobile homes and caravans

Standard door lockers are good, as long as they are new. Reality is different. ScheffGO® was aware of all these problems and developed CS-01 and CI-02.

These door lockers work without any screw fixings. Both locker types are unique in the market and patent pending.

Left side picture shows a standard locker after intensive use.

It is obvious, this locker has to be exchanged. By changing such kind of locker all well known problems, like screw misfitting, rust, etc., will come up.

Installation

ScheffGO® door lockers CS-01 and CI-02 are easy to install. Just slide them on top of hinge.

Without any tools or screws.

Lockers are made of soft plastic. This type of plastic does not do any harm to lack, hinge, door or door frame.
