2nd Neurovascular Minimally Invasive Course EC IC Bypass Surgery

Welcome to this intensive two-day neurosurgical workshop focused on STA–MCA bypass procedures. The course is designed to provide a comprehensive and hands-on learning experience, guiding participants through the essential steps of the surgical workflow. The first day offers practical training on microsurgical techniques using specialized models, allowing participants to refine their skills in vessel handling and suturing under expert guidance. On the second day, participants will simulate the full bypass procedure on cadaveric specimens, gaining valuable experience in performing each key surgical step.

This workshop provides a realistic and focused environment for neurosurgeons aiming to enhance their bypass surgery skills and build confidence in performing STA–MCA anastomoses.

I wish you an enjoyable and rewarding experience throughout the course—have fun and make the most of this unique opportunity!

Sincerely yours,
