- Made in Germany

Applications

- Sanitary accessories
- Shower rails
- Toilet Seats
- Clamps
- Shades / Pleated
- Curtain rods

i.STICK 1K pouch 6 g

Art.no. 1000-36

Packaged product / Own label product

ADHESION SPECTRUM

For tension-equalizing bonding and assembly of different materials indoors and outdoors: wood, wood-based materials, concrete, glass, metal (e.g. aluminum, stainless steel, anodized, brass, copper, zinc), plastics (e.g. hard PVC, soft PVC, GRP, etc. .), mineral substrates (e.g. bricks, tiles, ceramics), fire-protected building boards (plasterboard, etc.)

PRE-TREATMENT OF THE SURFACES

In order to achieve reproducible results, the stable subsurface must be prepared according to the state of the art. All undefined surfaces must be removed using a suitable process and the adhesive and sealant applied to the prepared surface in a timely manner. For this purpose, mechanical and / or chemical pretreatment or cleaning using rubbing alcohol, isopropanol or acetone is recommended, depending on the part to be joined and the requirements to be expected. Before applying an adhesion promoter or adhesive, the substrate must be stable and free from dust, oil and grease.
